

## Result

```
*****
Lab 6 Test Execution Start
*****  
  
Fetching data from external resources and creating access control objects...  
Successfully created user: SuperAdmin  
Successfully created user: Admin1  
Successfully created user: Manager1  
Successfully created user: User1  
  
--- Initial Users ---  
Name: SuperAdmin, Level: SUPERUSER Level, Access Control Level:SUPERUSER, Access: ADD/REMOVE USERS, INSTALL/UNINSTALL APPLICATIONS  
Name: Admin1, Level: ADMIN Level, Access Control Level:ADMIN, Access: ADD/REMOVE USERS  
Name: Manager1, Level: MANAGER Level, Access Control Level:MANAGER, Access: GENERATE/READ REPORTS  
Name: User1, Level: USER Level, Access Control Level:USER, Access: DO_WORK  
-----  
  
--- Testing unique username constraint ---  
ERROR: User with name 'Admin1' already exists. Cannot create user.  
-----  
  
--- Testing SUPERUSER view permission ---  
  
--- SuperAdmin (SUPERUSER) is viewing all users ---  
Name: User1, Level: USER Level, Access Control Level:USER, Access: DO_WORK  
Name: Manager1, Level: MANAGER Level, Access Control Level:MANAGER, Access: GENERATE/READ REPORTS  
Name: Admin1, Level: ADMIN Level, Access Control Level:ADMIN, Access: ADD/REMOVE USERS  
Name: SuperAdmin, Level: SUPERUSER Level, Access Control Level:SUPERUSER, Access: ADD/REMOVE USERS, INSTALL/UNINSTALL APPLICATIONS  
--- End of user list ---  
  
--- Testing non-SUPERUSER view permission ---  
  
Admin1 does not have permission to view all users. Access Denied.  
  
*****  
Lab 6 Test Execution End
```

The screenshot shows an IDE interface with a code editor and a terminal window.

**Code Editor:** The code in the editor is:

```
public class TestPrototypePattern {  
    public static void main(String[] args) {  
  
        if (superUser != null) {  
            superUser.viewAllUsers();  
        }  
  
        System.out.println("\n--- Testing non-SUPERUSER view permission ---");  
  
        if (adminUser != null) {  
            adminUser.viewAllUsers();  
        }  
  
        System.out.println("\n*****");  
        System.out.println("Lab 6 Test Execution End");  
        System.out.println("*****");  
    }  
}
```

**Terminal Window:** The terminal window displays the execution results:

```
--- SuperAdmin (SUPERUSER) is viewing all users ---  
Name: User1, Level: USER Level, Access Control Level:USER, Access: DO_WORK  
Name: Manager1, Level: MANAGER Level, Access Control Level:MANAGER, Access: GENERATE/READ REPORTS  
Name: Admin1, Level: ADMIN Level, Access Control Level:ADMIN, Access: ADD/REMOVE USERS  
Name: SuperAdmin, Level: SUPERUSER Level, Access Control Level:SUPERUSER, Access: ADD/REMOVE USERS, INSTALL/UNINSTALL APPLICATIONS  
--- End of user list ---  
  
--- Testing non-SUPERUSER view permission ---  
  
Admin1 does not have permission to view all users. Access Denied.  
  
*****  
Lab 6 Test Execution End  
*****  
Process finished with exit code 0
```

# Code changed

## Class AccessControlProvider

```
// new code added
map.put("SUPERUSER", new AccessControl( controlLevel: "SUPERUSER", access: "ADD/REMOVE USERS, INSTALL/UNINSTALL APPLICATION")
}

Add method

public static User createUser(String userName, String level) { 5 usages

    if (userRegistry.containsKey(userName)) {
        System.out.println("ERROR: User with name '" + userName + "' already exists. Cannot create user.");
        return null;
    }

    AccessControl accessControl = getAccessControlObject(level);
    if (accessControl == null) {
        System.out.println("ERROR: Invalid user level '" + level + "'.");
        return null;
    }

    User newUser = new User(userName, level: level + " Level", accessControl);
    //
    userRegistry.put(userName, newUser);
    System.out.println("Successfully created user: " + userName);
    return newUser;
}

//
```

## In User Class

### Add method

```
public void viewAllUsers() {
    if ("SUPERUSER".equals(this.getAccessControl().getControlLevel())) {
        System.out.println("\n--- " + this.userName + " (SUPERUSER) is viewing");
        Collection<User> allUsers = AccessControlProvider.getAllUsers();
        for (User u : allUsers) {
            System.out.println(u); // 使用现有的toString()方法打印用户信息
        }
        System.out.println("--- End of user list ---");
    } else {
        System.out.println("\n" + this.userName + " does not have permission to");
    }
}
```

## Test Code

```
// TestPrototypePattern.java

public class TestPrototypePattern {

    public static void main(String[] args) {
        System.out.println("*****");
        System.out.println("Lab 6 Test Execution Start");
        System.out.println("*****\n");

        User superUser = AccessControlProvider.createUser("SuperAdmin", "SUPERUSER");
        User adminUser = AccessControlProvider.createUser("Admin1", "ADMIN");
        User managerUser = AccessControlProvider.createUser("Manager1", "MANAGER");
        User basicUser = AccessControlProvider.createUser("User1", "USER");

        System.out.println("\n--- Initial Users ---");
        System.out.println(superUser);
        System.out.println(adminUser);
        System.out.println(managerUser);
        System.out.println(basicUser);
    }
}
```

```
System.out.println("-----\n");

System.out.println("--- Testing unique username constraint ---");

AccessControlProvider.createUser("Admin1", "USER");

System.out.println("-----\n");

System.out.println("--- Testing SUPERUSER view permission ---");

if (superUser != null) {

    superUser.viewAllUsers();

}

System.out.println("\n--- Testing non-SUPERUSER view permission ---");

if (adminUser != null) {

    adminUser.viewAllUsers();

}

System.out.println("\n*****");

System.out.println("Lab 6 Test Execution End");
```

```
System.out.println("*****");
}

}
```
